

Drought Monitoring and hydric balance in Catalonia

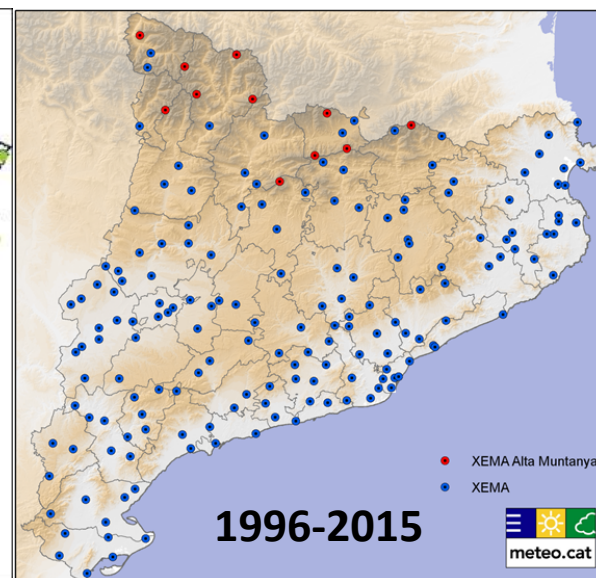

1. Initial datasets
2. Current State of Indices and cartography
3. Ongoing developments
4. Future guidelines

Initial distribution
(National historical database)

New spots detected
Time coverage improvement

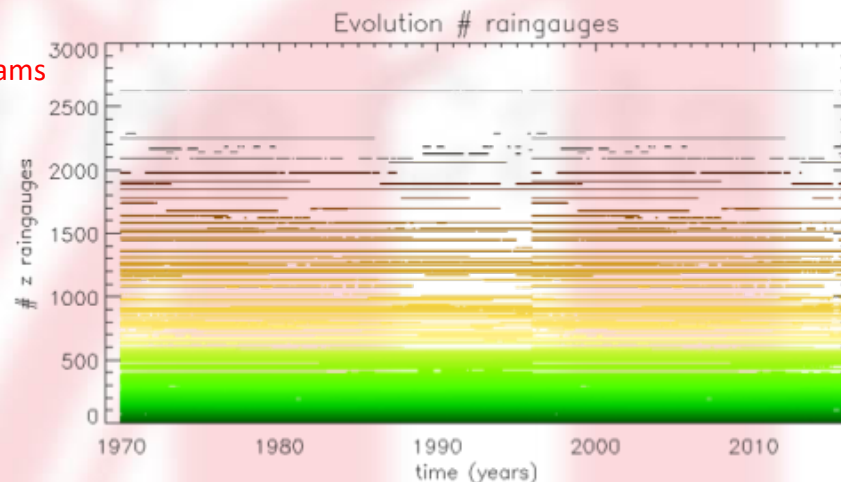

Automatic weather station network (SMC)
High mountain network

More than 1250 raingauges and 660 temperature stations

Daily Evolution of stations number (1970-2017)

Number of raingauges according to their altitude (1970-2017)

Current Indexes and characteristics

Current End-User:

Standardised Precipitation Index (SPI) (McKee et al, 1993)

Data needs: daily accumulated precipitation

Updated monthly(at site locations) and daily(1x1km grid)

CATALAN WATER
AGENCY

Reference Evapotranspiration (ET_o) (FAO, 1998)

Data needs: temperature, relative humidity, radiation, wind,

Updated hourly(at site locations)

WATERING OFFICE
&
AGRICULTURE DEPT.

Drought Code (DC) from the Canadian Forest Fire Index (Turner, 1972)

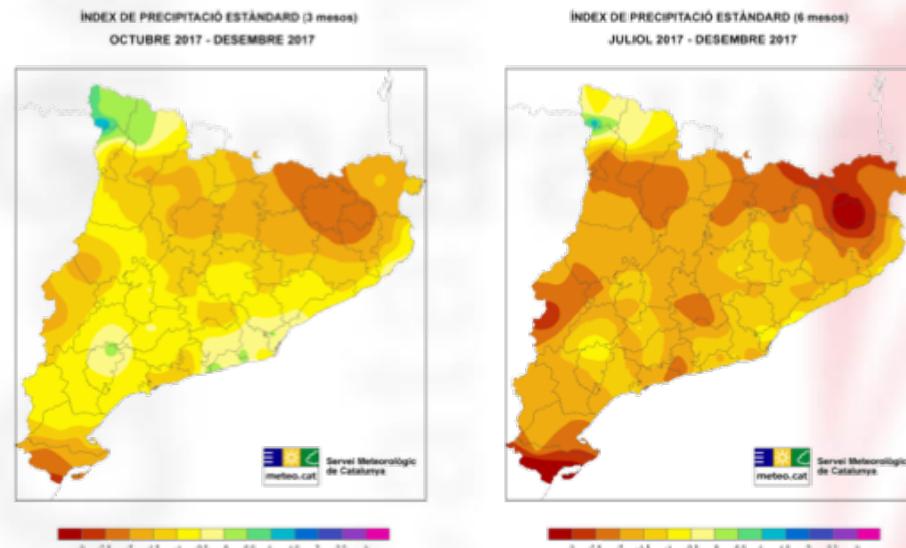

Data needs: daily accumulated precipitation and 12UTC temperature

Updated daily (1x1km grid)

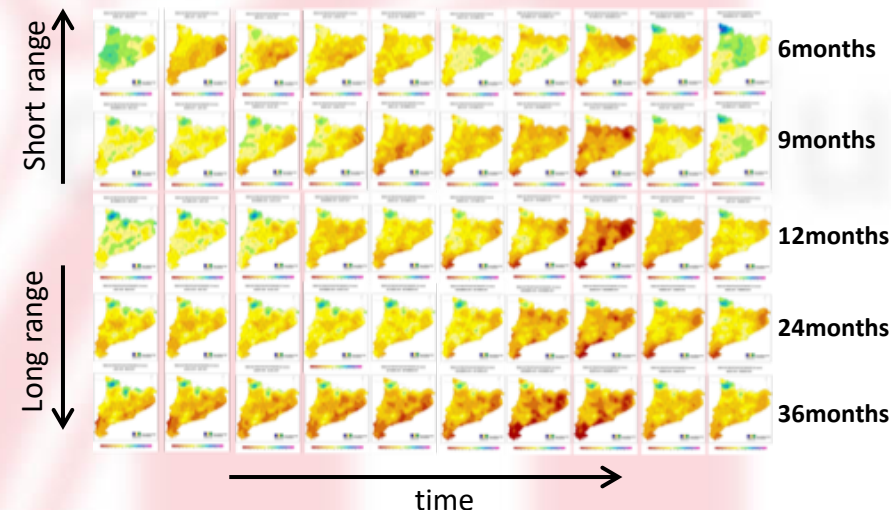

CATALAN FOREST FIRE
PREVENTION SERVICE

CARTOGRAPHY AT THE SMC WEBSITE:

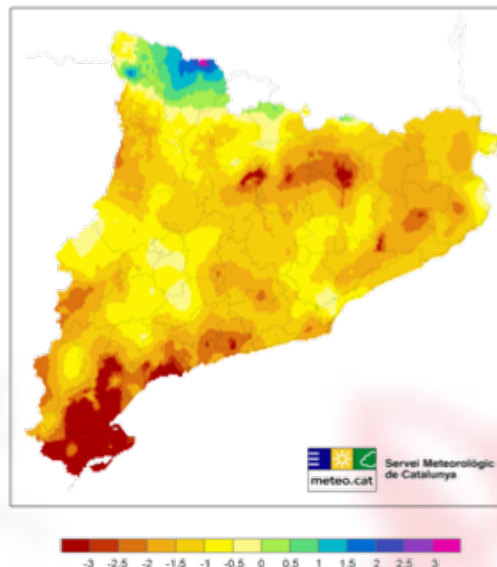

DROUGHT EVOLUTION

1. RESOLUTION IMPROVEMENT

INDEX DE PRECIPITACIÓ ESTÀNDAR IPE12

01/01/2018

New grid resolution (1x1 km)

Old resolution (station kriging)
NO GRID!!

2. NEW AGGREGATION INTERVALS

2 months

Short range drought

Long range drought

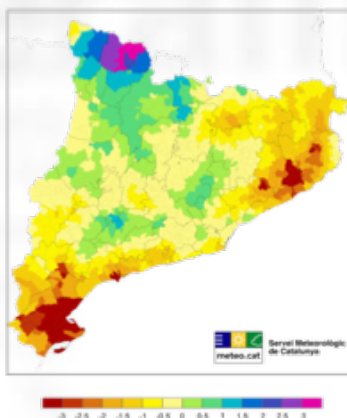

72 months

3. HYDRIC REGIME AT CATALAN MUNICIPALITIES

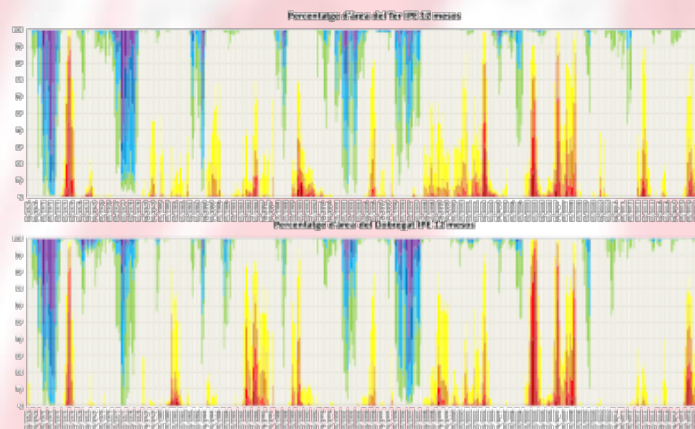

INDEX DE PRECIPITACIÓ ESTÀNDAR IPE12
10/06/2018

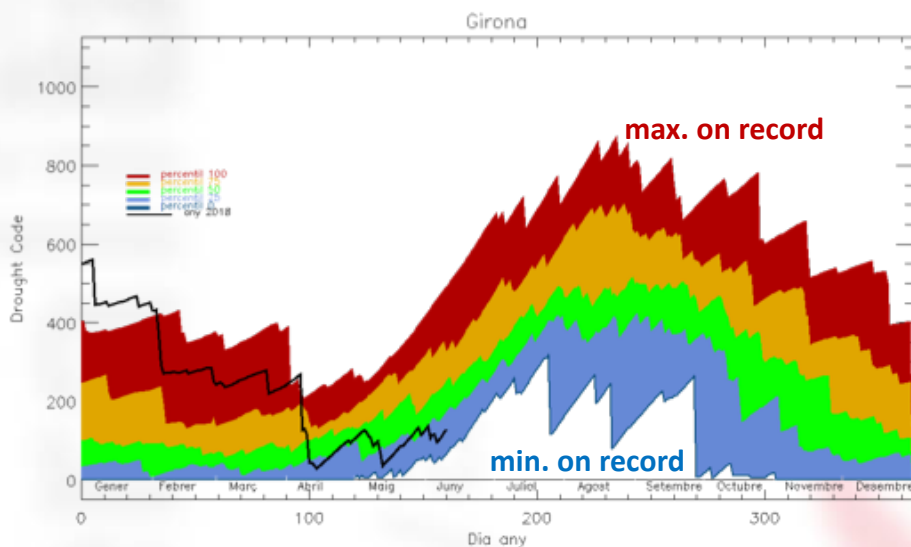

INDEX DE PRECIPITACIÓ ESTÀNDAR IPE24
10/06/2018

4. % DROUGHT AFFECTATION ON RIVER BASINS (time series 1970-now)

1. DC SITE BY SITE HISTORICAL OVERVIEW (1996-2016)

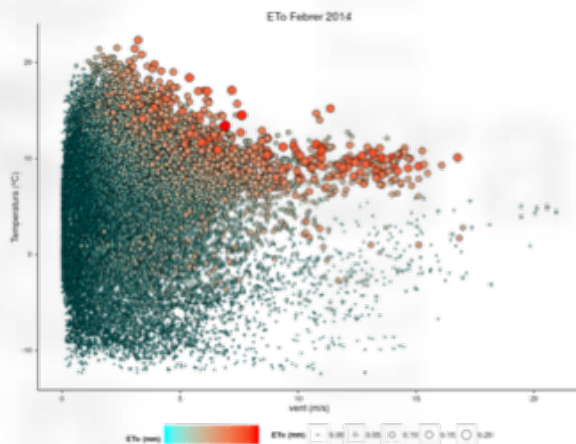

2. DC 1X1 KM GRID RESOLUTION

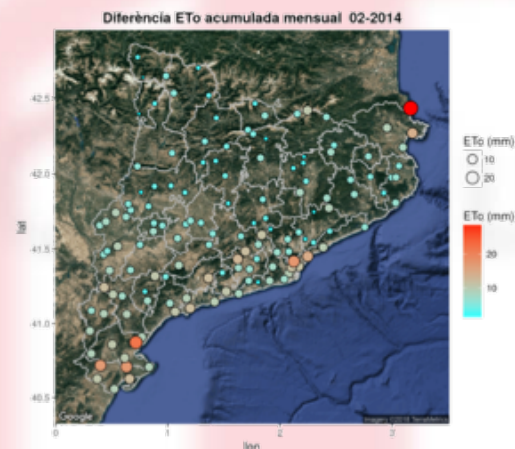

End-user:
CATALAN FOREST FIRE
PREVENTION SERVICE

3. ETo RECALCULATION AT HOURLY TIME SCALE

4. ACCUMULATED ETo AND DIFERENCES WITH OLD VERSION DATASET

1. Adaptation of the Standardised Precipitation Index (SPI) to hydrological drought and Application to seasonal prediction purposes

Demandand: CATALAN WATER AGENCY

2. Short and medium range (7 days) probabilistic ETo prediction (FAO, 1998)

Demandand: WATERING OFFICE, IRTA and AGRICULTURE DEPT

3. Hydric Balance (PPT-ETo) and derived indexes

Demandand: WATERING OFFICE, IRTA, AGRICULTURE DEPT, CATALAN CLIMATE CHANGE OFFICE

4. Canadian Forest Fire Index components at high resolution (FWI, ISI, DMC, DC)

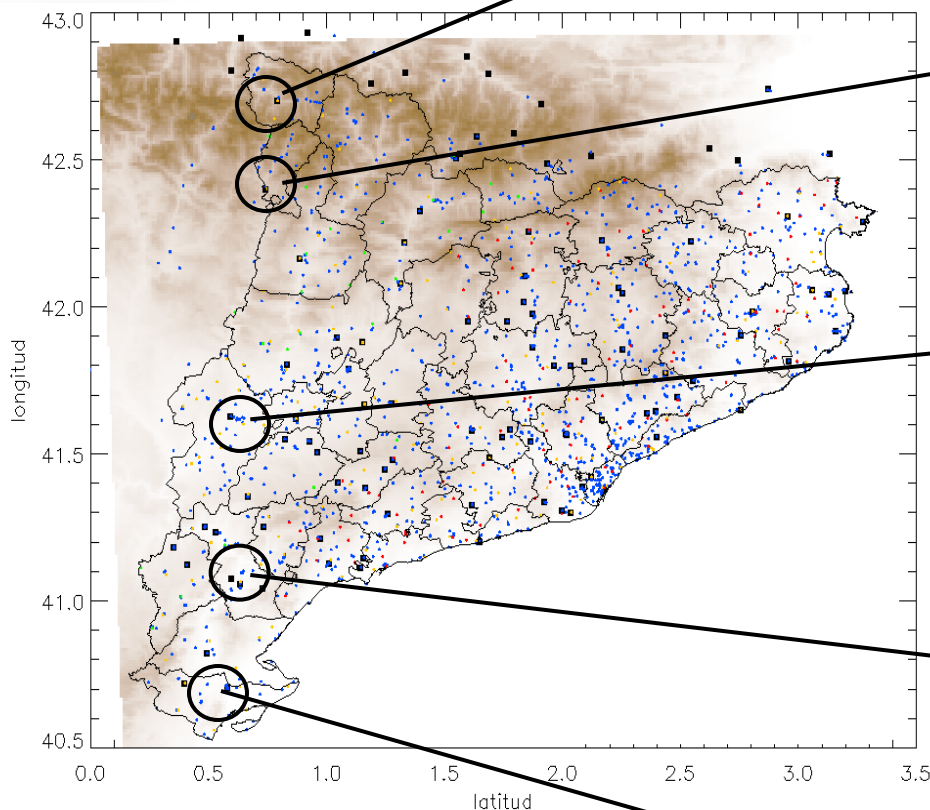

Demandand: FOREST FIRE PREVENTION SERVICE

ADDITIONAL INFORMATION

GRID CONSTRUCTION:CLUSTERS

BAIC vs ALL NETWORK

Area of Influence
